1. Reporting Requirements

About the Performance Report and Plan

The Coon Creek Watershed District (District) is required to annually report on a variety of activities. These requirements and the state and federal laws that mandate the reporting are listed here.

Watershed Act

The Minnesota Watershed Act (M.S. 103D.351) requires the District to prepare a yearly report of

- The financial conditions of the District
- The status of all projects
- The business transacted by the District
- Other matters affecting the interests of the District
- The District plans for the succeeding year

Metropolitan Water Management Act

The Metropolitan Water Management Act (M.S. 103B.231) requires a yearly report similar to the Watershed Act but stipulates specific financial and activity items to be reported.

- Roster and contact information for the Board and Advisory Committees
- Various financial expenditure information
- Permit and enforcement activity
- Annual plan
- Status of local plan adoption
- Summary of monitoring data
- Status of wetland banking

Federal Clean Water Act

The National Pollution Discharge Elimination System (NPDES) Program requires all MS4s to file an annual report of specific activities related to the Minimum Control Measures (MCMs) identified in the District Storm Water Pollution Prevention Plan (SWPPP).

Wetland **Conservation Act**

The Minnesota Wetland Conservation Act (M.S. 103A) requires the Board of Water and Soil Resources to report to the legislature on various activities related to the implementation of the Act. All LGUs that receive funding through the Natural Resource Block Grant (NRBG) program administered by BWSR are required to report on:

- The number of WCA applications
- Replacement plans
- Size of wetland impacts and losses
- Use of credits for replacement
- **Exemption determinations**
- Replacement wetlands
- **Enforcement actions**
- Administrative and technical training

2. Coon Creek Watershed District At a Glance

Introduction

The Coon Creek Watershed District (District) was created in 1959. The Watershed encompasses 92 square miles of the northern edge of the Twin Cities Metropolitan Area and is located entirely within Anoka County. The Watershed Act (103D) and the Metropolitan Water Management Act (103B) provide the most basic authorities for the District. In 1990 the District Board adopted a mission statement to guide District programs and activities:

Mission

To manage groundwater and the surface water drainage system to prevent property damage, maintain hydrologic balance, and protect water quality for the safety and enjoyment of citizens, and preserve and enhance wildlife habitat.

Organizational Structure

A Board of Managers administers the District. The Board is composed of five members representing different areas of the District. Each Manager

- Serves a three-year term, staggered
- Is nominated by his or her local unit of government
- Is appointed by the Anoka County Board

The watershed Board is statutorily authorized to employ professional assistants in carrying out its duties. The Board and staff provide leadership on a watershed-wide basis. Watershed-wide policy and direction are formulated and provided for field implementation through District and Municipal activities.

The current organizational structure is shown on the next page.

Coon Creek Watershed District Organizational Structure Research Professional Water Resource Professional Program Coordinators District Administrator Board of Managers Technical Advisory Committee Citizen Advisory Committee Attorney

District Business Model

As the lead agency in the watershed for water resource management, the Coon Creek Watershed District provides leadership in the protection, management, and use of water and related land resources.

The watershed uses a multiple-use land management approach to pursue eleven goals. To pursue the goals, the Coon Creek Watershed District operates six programs which oversee 22 basic tasks: The programs are:

- 1. Administration
- 2. Development Regulation and Issue Management
- 3. Operations and Maintenance
- 4. Planning, Programming, and Budgeting
- 5. Public and Governmental Relations
- 6. Research, Monitoring, and Data Collection

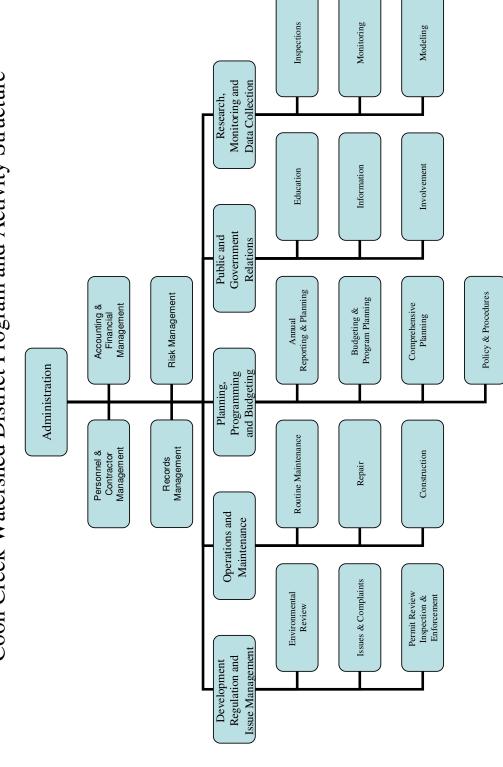

Link to District Budget

These programs are developed to provide better public service and sustainable land stewardship practices. They are also the context for budgeting and tracking District activities and tasks.

Adjustments to Comprehensive Plan

The annual goals for our 2010 Budget and Plan are based on the District Comprehensive Plan (approved by the Board of Water & Soil Resources in October 2004) and SWPPP (received by the MPCA in May 2006). Adjustments to some District objectives and outcomes are based upon more recent performance information and current and projected funding levels.

Coon Creek Watershed District Program and Activity Structure

State of the Watershed

Resource Conditions The overall condition of the water resources within the Coon

Creek Watershed is Potentially Serious. Potentially Serious Resource Conditions are those requiring immediate attention because they present serious problems or because there is no known management strategy or technology for dealing with them.

A summary of the overall resource condition is provided below.

Acceptable Potentially Acceptable Resource Conditions are those where

existing conditions and projected levels of use can be sustained

with current and expected future levels of management.

Deteriorating Potentially Deteriorating Resource Conditions occur when future

management and technology are not expected to keep pace with demands for resource uses and/or resource conditions will

deteriorate in the future.

Serious Potentially Serious Resource Conditions are those requiring

immediate attention because they present serious problems or because there is no known management strategy or technology for

dealing with them.

3. District Program Review

Coon Creek Watershed District is managed through six programs:

- 1. Administration
- 2. Development Regulation and Issue Management
- 3. Operations and Maintenance
- 4. Planning, Programming, and Budget
- 5. Public and Governmental Relations
- 6. Research, Monitoring, and Data Collection

ADMINISTRATION

Program Description

This program implements the approved policies of the Board of Managers, administers the financial affairs of the Coon Creek Watershed District, ensures the accountability of public funds, and serves the District financial needs.

Activities and Outcomes

The Administration Program consists of six activities:

- Board of Managers 1.
- 2. Records
- 3. Contract and Personnel Administration
- **Training and Seminars** 4.
- Financial Management 5.
- 6. Risk Management

Board of Managers: Members, Officers, Contact Information and Terms

The District is governed by a Board of Managers. The Board is composed of five members representing different geographic areas of the District. Each Manager serves a staggered three-year term, is nominated by his or her local unit of government, and is appointed by the Anoka County Board.

| | | | | Current | |

Principle Place of Business

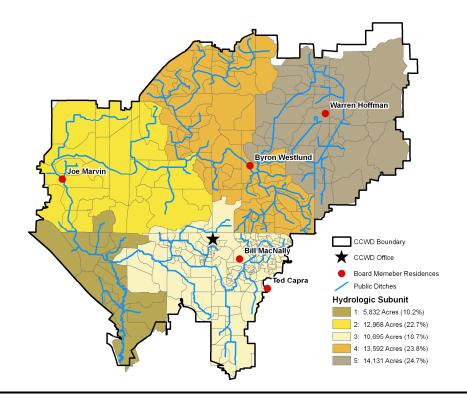

Minnesota Statutes 103D.321, Subd. 1 requires the District to designate a public facility within the watershed district as a principal place of business.

Address 12301 Central Avenue NE, Suite 100

Blaine, Minnesota 55434

Phone 763-755-0975 **Fax** 763-755-0283

Web <u>www.cooncreekwd.org</u> E-mail info@cooncreekwd.org

Oath of Office

Minnesota Statute 103D.315 requires all Managers to take and Oath of Office. Each Manager is sworn in using the Oath of Office, when they are appointed. In addition, the Board re-administers the Oath of Office annually at the first Board meeting of each year.

Minutes

Minnesota Statute 103D.315, Subd. 5 requires that the District keep records of all business done and meetings held by the Board of Managers All Board meetings are recorded and minutes are prepared and presented to the Board for approval. Approved minutes are available at the District office and online at www.cooncreekwd.org >about us>board information>past minutes.

Meetings

The Board of Managers meets on the second and fourth Monday of each month (24 times per year). The meeting schedule is published in the Anoka County Union and on the District website (www.cooncreekwd.org). The meeting schedule is also stipulated in the District rule. Board meetings are at:

Address Bunker Hills Activity Center

550 Bunker Lake Blvd NW

Andover, MN 55304

Phone 763-757-3920 Fax 763-755-0230

In 2010 the Board met 18 times. Five regularly scheduled meetings were cancelled. All of the cancelled meetings occurred on the second Monday of the month.

Solicitation of Interest Proposals for Service Providers

The District employs seven technical service providers. Minnesota Statutes 103B requires that the District solicit interest proposals for legal, professional, or technical consultant services before retaining the services of an attorney or consultant or extending an annual services agreement at least every two years.

Solicit interest proposals (SIP), Request Service Proposal (RFP), Review Rates & Services (RRS)

Official Depository

Minnesota Statutes 103D.351 requires the District to report its financial transactions, and Minnesota Statutes 103D.925 authorizes the District to issue warrants for payment of contracts and general expenses. To accomplish both payment, and reporting, the District must have a depository for its funds and uses the US Bank as its official depository.

Fund Equity

In the 2003 and 2004 audits, the State Auditor expressed concern about the size of the fund balances/fund equity being held by the District and recommended that:

- 1. Fund equity amounts be reviewed annually
- 2. The Board approves these designations, with acknowledgement in the Minutes.

<u>Annual Financial Audits</u>
The District utilizes the Minnesota State Auditor to perform the annual audit. Generally, the audit team is the same team auditing Anoka County. The timing of the District audit is subject to work load and availability of the State Auditor.

| Implications of Recent Administrative Trends for the Management of the Watershed (2011 to 2016) | | | | | |
|--|--|--|--|--|--|
| Trend | Implications | | | | |
| Number of Meetings per | While the amount of business the Board conducts has actually | | | | |
| Year | increased, the need to always meet twice per month has decreased. | | | | |
| Annual Audit | The amount of detail and the audit standards from the GASB have led to increased time and complexity in preparing and reporting for the annual audit. | | | | |
| Smaller Year End Balances/ Increased cash demands for water quality and ground water management | The District has resolved its excess fund balance issue per State Auditor recommendation. That decrease has in turn restricted the funds available to respond to disasters and emergencies such as the tornado damage of 2008. | | | | |
| Aging Monitoring Equipment | Monitoring equipment (rain gages and WL-40s) that were expected to last 4 to 5 years are now often in their 12 to 15 th year of service. 2-3 of these devices per year have begun to fail | | | | |

| Expectations About Future Administration of the Watershed | | | | | | |
|--|---|--|--|--|--|--|
| Expectations | Explanation | | | | | |
| Fewer Board Meetings with longer agendas | The District and the public can expect that the Board of Mangers will convene fewer meetings in 2011 for at least part of the year. | | | | | |
| Increased time involved in annual audit | With staffing changes and constraints at both the County and the OSA, increased time will be devoted to preparing and managing the audit. | | | | | |
| More Involved Budget Discussions/Increased Taxes | While the Board of Managers has decreased its property tax levy each of the last three years to address State Auditor concern about excess fund balances and to ease District impact during the downturn in the national and local economy, it may have over-corrected. However, discussion of an over-correction needs to be offset by a re-evaluation of overall responsibilities, needs, and priorities of the watershed district. | | | | | |
| Increased failure of key monitoring equipment | Monitoring equipment (rain gages and WL-40s) that were expected to last 4 to 5 years are now often in their 12 to 15 th year of service. Two to three of these devices per year have begun to fail. | | | | | |

| Immediate Needs (2012 – 2013) | | | | | |
|---|---|--|--|--|--|
| Need | Explanation | | | | |
| Review of Economics and Financing of Watershed Operations | Future demands on water resource operations will require money. Any reasonable increase in taxes or grants will most probably only fund a small portion of the physical work and monitoring that will need to be done. A review of economic and funding options for District operations would be appropriate. | | | | |
| Replace monitoring equipment and other assets | Begin budgeting either for replacement of monitoring equipment or partial replacement annually | | | | |

| Intermediate Needs (2013 – 2016) | | | | |
|-----------------------------------|--|--|--|--|
| Need | Explanation | | | |
| Valuation of Groundwater Stock | The quantity and economic value of the groundwater supplies available to the District need to assessed and valued. | | | |

DEVELOPMENT REGULATION & ISSUE MANAGEMENT

PROGRAM DESCRIPTION

The purpose of development regulation is to evaluate, permit, and monitor plans and programs affecting the water and related land resources of the District in an orderly and informed fashion.

The Development Regulation and Issue Management Program consist of four activities:

- 1. Environmental Review which includes comments on DNR and Corps of Engineers permits
- 2. Permit Inspection and Enforcement
- 3. Permit Review
- 4. Permits
- 5. Final Inspections, Project Close Outs & Escrow Returns

Shenandoah Blvd looking north towards Hwy 242 reconstruction

Cardinal Ridge 2nd addition in Andover

Description

This activity reviews and comments on plans, permits, assessments and studies issued by federal, state, and local units of government for the completeness, accuracy, and consistency of water resource proposals relative to District goals, objectives, and standards.

| Measures | 2009 | 2010 | 2011 | 2012 | 2013 |

DEVELOPMENT REGULATION Permit Inspection & Enforcement

Description

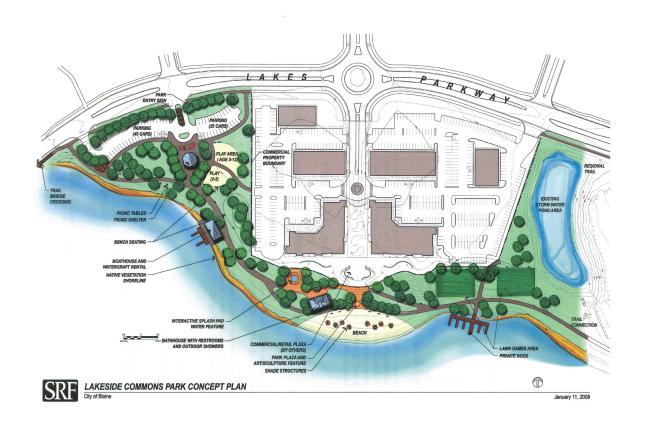

This activity ensures compliance with permit requirements and the goals, objectives and rules of the District. The activity is intended to:

- 1. Ensure that the approved plan is implemented
- 2. Provide the landowner with technical assistance as needed
- 3. Provide a means to determine if changes to the plan are necessary
- 4. Observe and document deviations from the plan as they occur

DEVELOPMENT REGULATION Final Inspection & Escrow Returns

Description

This activity reviews completed development and other construction projects for compliance and adherence to the approved plans. The activity also includes a tabulation of District incurred costs for review, inspection and any site repair or stabilization that may have been needed prior to returning the balance of escrows held by the District.

| Measure | 2009 | 2010 | 2011 | 2012 | 2013 |
|-------------------------------|----------|-----------|-----------|-----------|-----------|
| Final Inspections Conducted | 33 | 115 | 100 | 75 | 75 |
| Fees withheld by District | \$4,937 | \$43,763 | \$40,000 | \$30,000 | \$30,000 |
| Number of Projects closed out | 33 | 115 | 100 | 75 | 75 |
| Value of Escrow Returned | \$84,316 | \$572,067 | \$125,000 | \$100,000 | \$100,000 |

| Implications of Recent | Regulatory Trends for the Management of the Watershed |
|--|--|
| Trend | Implications |
| Decline in the number of Environmental Reviews | Fewer large projects requiring EAWs and fewer projects that require state permits. |
| Increase in Issues and Complaints | More staff time will be dedicated to issue and complaint management. Particularly in the areas of compliance, water quality, wetlands and availability and maintenance. |
| Increasing emphasis on water quality and groundwater | Analysis, planning, and review of sites for development or modification will require an increased awareness of the overall hydrology of the site, the effect of the proposal on the local hydrology and how to integrate existing hydrologic tendencies into the proposal. |
| Decrease in the number of permit reviews/ Increase in project complexity | While the number of projects requiring a permit or review has decreased the complexity of the reviews resulting from drainage, water quality and wetland issues has increased as has the need to exercise care and provide assistance to applicants seeking approval. |

| Expectations about the | future for Regulation of the Watershed (2010 to 2012) |
|--|--|
| Expectations | Explanation |
| Increased enforcement and preventive inspections | With the drought conditions and the development that is occurring, increased enforcement and inspection time per application can be expected. |
| Number of applications may increase slightly | There are several smaller projects that are being considered within the watershed. Their success may depend on early involvement by the watershed district in designing the stormwater system. |
| Increased complexity in review and approval | With the drought, complexity has increased with concerns about water levels and water availability. As the District moves more into the water quality era, more time will be involved in increasingly sophisticated water quality review |

| Immediate Needs (2012 – 2013) | | | | |
|---|--|--|--|--|
| Need | Explanation | | | |
| Amend rules to require 1.5" of infiltration from 1" | 1.5 inches is the 95 th percentile of storm recurrence within the watershed | | | |

| Intermediate Needs (2013 – 2016) | | | | | |
|----------------------------------|-------------|--|--|--|--|
| Need | Explanation | | | | |
| | | | | | |

OPERATIONS & MAINTENANCE

PROGRAM DESCRIPTION

The purpose of the Operations and Maintenance program is the planning, design, construction and maintenance of the District ditch system and water control structures, and to preserve the location, character, and extent of the District ditch and conveyance system.

The Operations & Maintenance program consists of the following activities:

- 1. Routine Maintenance
- 2. Non-Routine Maintenance
- 3. Repair and Rehabilitation
- 4. Retrofit and Construction

Ditch 39

The purpose of the annual inspection is to assess the general condition of the entire drainage system for identification of maintenance needs. Inspections vary in detail and can range from a windshield inspection of the District public drainage system to taking elevations and cross sections every 100 feet, photographing the ditch channel, and comparing to established performance standards based on functional classification of the ditch.

Measure / Outcome

BNRR Riprap Obstruction May 2010

This activity investigates and responds to unanticipated and unplanned circumstances, events or conditions that may affect the Water and related land resources of the watershed or District operations.

Woodcrest Creek Rehabilitation Fall 2010

This activity involves the creation of new water management facilities or the increase in capacity of existing systems. The Coon Creek Watershed District may fund Creek and ditch bank stabilization through a process involving inspection, diagnosis of cause and design of a stabilization method which gives preference to bioengineering, a determination of problem significance, and contracting work.

| Measures | 2009 | 2010 | 2011 | 2012 | 2013 |

| Bank Stabilization projects | Creekside Trailer Pk Egret Blvd x Creekside Trailer Pk Crown Point | Woodcrest Creek Rehabilitation | Betts Bank Stabilization | | |

Activity involves restorative construction work typically involving forestry practices and or heavy excavating equipment. The intent of the activity is to restore all or a part of a drainage system as nearly as practicable to the same condition as originally constructed and subsequently improved.

| Implications of Recent Operations and Maintenance Trends for the Management of the Watershed | | | | | |
|--|--|--|--|--|--|
| Trend | Implications | | | | |
| Decreased Water Availability | The increasing scarcity of water is leading to minimum or no flow situations, drops in lake elevations, and the general drying out of wetlands and ponds which serve aesthetic purposes. | | | | |
| Increased trees and potential obstructions in channel | As water levels drop or flows become variable, trees are becoming more prone to wind throw or heaving resulting in more debris in the channel. Under normal flow conditions, this material should be removed immediately. During low flow conditions downed material provides an opportunity to detain or retain water for aesthetic and fisheries purposes as well as groundwater recharge. | | | | |

| Expectations about the future Operation and Maintenance of the Watershed (2010 to 2012) | | | | |
|---|---|--|--|--|
| Expectations | Explanation | | | |
| Increased emphasis on water conservation; in channel & in use | If the drought continues, the amount and use of water appropriated both from the creek and its tributaries and the shallow aquifer connected to the creek will become an emphasis for monitoring and enforcement. | | | |
| Increased variation in timing or removal of channel obstructions | If and when obstructions are removed may depend on the obstruction's contribution to detaining or retaining the flow of water without damaging the creek bank or structures. | | | |

| Immediate Needs (2012 – 2013) | | | | |
|---|--|--|--|--|
| Need | Explanation | | | |
| Evaluate the potential impacts for water conservation and flooding by boarding culverts | In 2009 the District boarded culverts in four locations in Blaine. The effort appeared to have some success and if performed over a larger area could significantly contribute to recharging surficial groundwater levels. | | | |
| Develop a contingent | Guidance is needed for the conditions, criteria, and circumstances for | | | |
| obstruction removal policy | timing of the removal or modification of obstructions. | | | |

PLANNING, PROGRAMMING, & BUDGETING

PROGRAM DESCRIPTION

The purpose of the program is to coordinate the planning, prioritizing, and financing of District programs and activities.

The Planning program consists following activities:

- 1. Annual Assessment, Reporting, and Planning
- 2. Budgeting and Program Planning
- 3. Comprehensive Planning
- 4. Modeling
- 5. Policy and Procedures

Comprehensive Plan presentation to Coon Rapids Sustainability Commission

August 2010

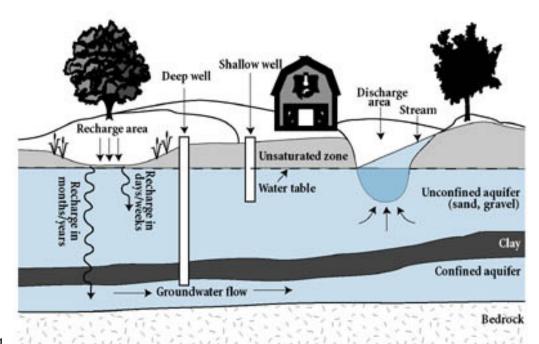

Assessment, Reporting, & Planning

Description

This activity presents basic statistics on the accomplishments and/or progress of District operations and activities in pursuing and achieving goals. It serves as the basis for accountability through quarterly objectives and through financial and program goals. Overall, the activity provides context for understanding the physical, social, and managerial trends and concerns affecting the District that may not have been anticipated in the Comprehensive Plan and the basis for accountability.

Specific tasks under this activity involve preparation of an annual report and work plan for implementing the District Comprehensive Plan approved by the BWSR and the District Storm Water Pollution Prevention Plan (SWPPP) approved by the MPCA.

PLANNING, PROGRAMMING, & BUDGETING

Budgeting & Program Planning

Description

The budget process and resulting budget describes the programs and projects the public will fund in pursuing the District Mission.

The budget process involves 11 steps detailed in District policy which begin with adoption of a budget calendar, then a review of District strengths and weaknesses and operating environment, followed by a tour of past and potential projects, public review, and ends with a public hearing and adoption of the succeeding-year budget in September.

PLANNING, PROGRAMMING, & BUDGETING Comprehensive Planning

Description

The Comprehensive Plan takes its direction from Minnesota law and the District Mission Statement. It is the guiding document for program and capital facilities management and provides context and purpose to near-term choices, and assesses the future consequences of those choices.

Tasks under this activity involve maintaining and updating the District Comprehensive Plan required under the Watershed Act (103D) and the Metropolitan Water Management Act (103B), and the District Storm Water Pollution Prevention Plan (SWPPP) which serves as the District NPDES permit under the federal Clean Water Act.

This activity models the hydrology of surface water flows within the watershed to provide an accurate simulation of District hydrology and water quality for assessing and determining management needs and actions. The activity also involves assessing the overall hydrology of the Watershed to gain insight into factors affecting surficial ground water levels and the amount of water lost to potential evapotranspiration (PET).

PLANNING, PROGRAMMING, & BUDGETING Procedures Policy and

The policy and procedures manual is intended to provide guidance, continuity, and consistency in District operations and activities. The manual is the principal source of specialized guidance and instruction for carrying out the direction issued in the program handbook. The manual may include significant procedural direction.

The program manual provides guidance, continuity, and consistency in District operations and activities. It contains the legal authorities, objectives, policies, responsibilities, instructions and guidance needed on a continuing basis by District staff to plan and implement assigned programs and activities.

PLANNING, PROGRAMMING, & BUDGETING Electronic Ditch Profiles

Description

Electronic media is rapidly becoming the standard of design and planning through GIS and CAD. All of the public ditch data need to be converted to electronic format. Plan sets are registered to CAD and GIS with current elevations and airphotos. Plan sets not reviewed and approved by DNR would be submitted. This is a 5-year program coordinated with our NPDES inspection requirements.

| | 2009 | 2010 | 2011 | 2012 | 2013 |
|-------|----------|----------|------------|----------|----------|
| Ditch | Ditch 11 | Ditch 58 | Ditch 39 | Ditch 23 | Ditch 17 |
| | Ditch 44 | Ditch 60 | Ditch 41 | Ditch 52 | Ditch 20 |
| | | | Lower | Ditch 59 | |
| | | | Coon Creek | | |

| Implications of Recent Planning Trends for the Management of the Watershed | | | | | | |
|--|---|--|--|--|--|--|
| Trend | Implications | | | | | |
| Increasing need to detail budget and work plan | State audit requirements have become more detailed and more stringent requiring increased detail in documenting the District budget, needs and expenditures. | | | | | |
| Increasing complexity in water quality regulations | MPCA is currently involved in at least seven efforts which will have regulatory requirements for the District. These efforts do not include any impairments or subsequent TMDLs which currently exist or may occur in the future. | | | | | |
| Increasing focus on Groundwater | In addition to water quality, many issues appear to have their origin in groundwater. | | | | | |

| Expectations about the future Planning of the Watershed (2010 to 2012) | | | | | | |
|--|---|--|--|--|--|--|
| Expectations | Explanation | | | | | |
| Conflict with MPCA | The current trend and emphasis on water quality does not take into account the impact of the drought nor the effect of the decline in groundwater on surface waters of the District. The District could continue to be held accountable for not achieving water quality standards for turbidity, TSS, and potentially DO when the root of the problem is decreased and declining flows. | | | | | |
| Audits could take longer to complete or at least require more staff time in a shorter period | Audit standards appear to change annually which affects the reporting and formatting of District records provided for analysis and reporting. | | | | | |

| Immediate Needs (2012 – 2013) | | | | |
|-------------------------------|---------------------|--|--|--|
| Need | Explanation | | | |

| Complete Hydrologic | Continue to monitor | | |
| Records | | | |

PUBLIC AND GOVERNMENTAL RELATIONS

PROGRAM DESCRIPTION

The purpose of the public and governmental relation program is to ensure that the continuing planning and management of the Coon Creek watershed is responsive to the needs and concerns of an informed public and to coordinate policies and programs of the local, state, and federal government agencies to achieve consistency with the plan.

A program consisting of three activities has been developed to carry out District policies. The components are:

- 1. Education
- 2. Information
- 3. Involvement

In practice, overlap will occur among these three components; all information is educational in nature, and education requires involvement.

Stormwater U Workshop-Turf BMPs for professionals, Blaine

December 2010

Stormdrain Stenciling, Northwest Passage Charter High School September 2010

Major needs of the District include greater public awareness of watershed water resources, appropriate use of water resources, and the issues and conflicts that arise when managing those resources. Increasing awareness is the first step in enhancing public commitment to sound natural resource management. The District makes presentations each year to civic & governmental organizations. These presentations focus on water resources, the establishment of the District, its purposes and policies, and issues facing the watershed. The District is used by the community as a credible reference regarding water resources information.

District education activities involve:

| Measures | 2009 | 2010 | 2011 | 2012 | 2013 |

NPDES presentation to Andover Public Works & Engineering

December 2010

Public information is essential in any public capital or regulatory program. It is also a prerequisite to both public education and public involvement. To be able to participate and sense when that participation will be most effective, individuals must first know the issues and the decisions needed to be made.

Means

| Measures | 2009 | 2010 | 2011 | 2012 | 2013 |

Implications of Public & Governmental Relations Trends for the Management of the Watershed (2011 - 2020)

| Trend | Implications |
|--|---|
| Measurement of public | More time will be needed to measure implementation of SWPPP goals |
| education and involvement | for the 2011 NPDES permit. Initially, time will be needed to determine |
| in reducing: | the most cost-effective protocol for CCWD; metrics methodology |
| 1. water quality pollution | guidance is, at best, limited. Training on survey metrics was started in |
| 2. water quantity impacts | 2010, and research will continue in 2011. |
| | |
| Increased number of | As stormwater maintenance changes and costs increase, customized |
| Trainings | trainings may need to be annually funded. |
| T ' 1' | |
| Increasing reliance on the | Anoka County is bringing fiber optic broadband to the whole county |
| internet as an information and outreach outlet for | starting 2012. According to Martha Weaver, Anoka County Public Information Manager, a county survey show that 81% of county |
| CCWD | residents had access to the internet in 2009. |
| CCWB | residents had access to the internet in 2009. |
| | Interactive Web tools for training, public engagement, and education |
| | will be expected by the public. Examples are webmapping, webinars, |
| | multimedia, and social media. |
| | |

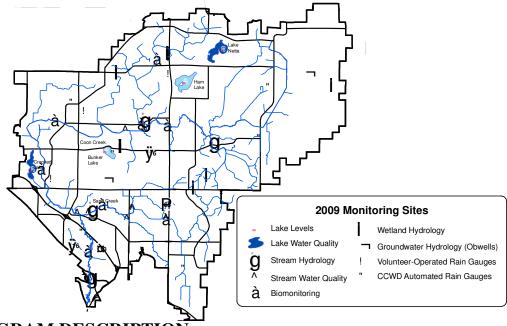

Expectations about the future for Public & Governmental Relations in the watershed

| Expectations | Explanation |
|----------------------------------|--|
| Increased number of Trainings | As stormwater maintenance changes, the District could play a larger role in cost-sharing and partnering on training workshops and webinars. |
| Source media transition | Methods of information dissemination will continue to evolve from hardcopy newspapers to digital as primary news sources. As the Internet becomes more accessible (faster and more available), there may be greater expectations for government to quickly deliver information and services through the Web. |
| Mobile education | As mobile phones are increasingly used for information gathering, more information delivery will likely need to be mobile–enhanced. Videos could be used for in-the-field or real-time trainings or as reference via mobile smartphones. One example: construction BMPs such as proper erosion control device installation or maintenance. |

| Immediate Needs (2012 | -2013) |
|---|--|
| Need | Explanation |
| Continue producing videos: focus on Public Service Announcements (PSAs), expanding to Features illustrating complex issues. | With the popularity increasing for short videos for broadcast on Web, local community access television, and at outreach events, there's more opportunity also available for illustrating complex concepts, issues, and their application in District activities. Collaborating with three local community-access cable stations has already resulted in 5 PSAs, of which four were produced internally at CCWD. |
| Develop methodologies to assess public knowledge, awareness, attitudes within varying demographic populations | The new NPDES permit will focus on implementation of SWPPP goals. Measurement of public engagement will be expected though methodology guidance is, at best, limited. Training on survey techniques was started in 2010; methodologies that are cost-effective are needed. |
| Keep pace with internet interface technology | Develop graphical interfaces for illustrating hydrology concepts to communicate the dynamic forces that affect the water resources and needs of District constituents. Research & determine most effective methods of outreach and education via Web interface. Ex: social media, Web2.0- web applications that facilitate interactive design, site design that flows easily between different screen sizes. |

| Intermediate Needs (2013 – 2016) | | | | | | | |
|--|---|--|--|--|--|--|--|
| Need | Explanation | | | | | | |
| Scientific graphics/animation production | Contemporary communications relies heavily on graphic-oriented methods to convey information. Plus, with the expansion of the District boundary, an increased presence on the ground, in local media, and especially on the Web will be needed to foster water quality & quantity BMP education & training efforts. Help with graphics production, for example the animation of the water cycle for the District Website, will be needed. | | | | | | |

RESEARCH, MONITORING, & DATA COLLECTION

PROGRAM DESCRIPTION

The purpose of the research, monitoring and data collection program is to gather and analyze data that will result in increased efficiency and effectiveness of watershed management and District programs. Most of the data that is presented in this section of the annual report and plan is drawn from "2009 Anoka Water Almanac: Water Quality and Quantity Conditions in Anoka County, MN," prepared by the Anoka Conservation District.

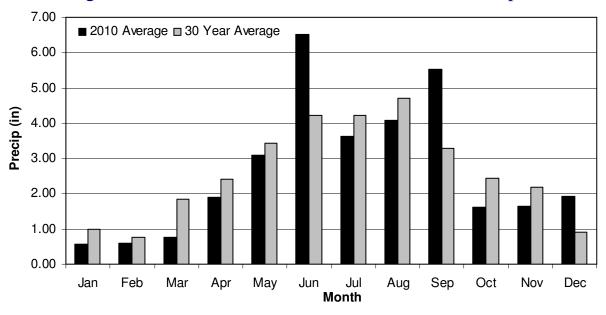

The research, monitoring, and data collection program provides integrated resource information used in planning, evaluating, and decision-making within the Coon Creek Watershed District. Program activities include:

- 1. Precipitation Monitoring
- 2. Stream
 - a. Hydrology
 - b. Water quality
 - c. Biology
- 3. Lakes
 - a. Hydrology
 - b. Water quality
- 4. Wetlands
 - a. Hydrology
 - b. Biology/Vegetation

District planning, regulation, and project decision-making depend upon scientifically credible and accurate resource information. This data allows resource managers to make scientifically based management decisions. These are all essential to effective resource management.

{Intentionally Blank}

Monitoring Precipitation

Description

This activity involves continuous monitoring of precipitation with both data-logging rain gauges and non-logging rain gauges that are read daily by volunteers. Rain gauges are placed around the watershed in recognition that rainfall totals and storm phenology vary over distance, and these differences are critical to understanding local hydrology including predicting flooding.

This activity involves monitoring observation wells installed by the Department of Natural Resources and maintained by the Anoka Conservation District. With increasing concern and awareness of declines in the surficial water table it is important that changes and trends in the surficial aquifer be reported at least annually.

2010 Hydrograph

Description

Continuous water level monitoring in streams at four locations provides understanding of stream hydrology, including the impact of climate, land use or discharge changes. These data also facilitate calculation of pollutant loads, and are use in computer models for developing management strategies.

| Monitoring Sites | 2009 | 2010 | 2011 | 2012 | 2013 | | |

Monitoring Biomonitoring

Description

In 2009 the District monitored six locations within the watershed. The effort coordinated by the Anoka Conservation District, assessed stream health using benthic (bottom-dwelling) macroinvertebrates. Certain macroinvertebrates, such as mayflies, stoneflies, and caddisflies, require high quality streams while others such as midges thrive in poor quality streams. Because of their extended exposure to stream conditions and sensitivity to habitat and water quality, these macroinvertebrates can serve as good indicators of stream health.

The Minnesota Pollution Control Agency (MPCA) has listed Coon Creek as biologically impaired based on single samples taken from two sites in August 2000. Both of these reaches are actively maintained ditches that had been recently cleaned. The purpose of this work is to:

- compare maintained and unmaintained creek reaches
- compare the Coon Creek system with similar nearby streams
- examine the effect of total suspended solids on invertebrate communities
- verify the MPCA findings.

Summary

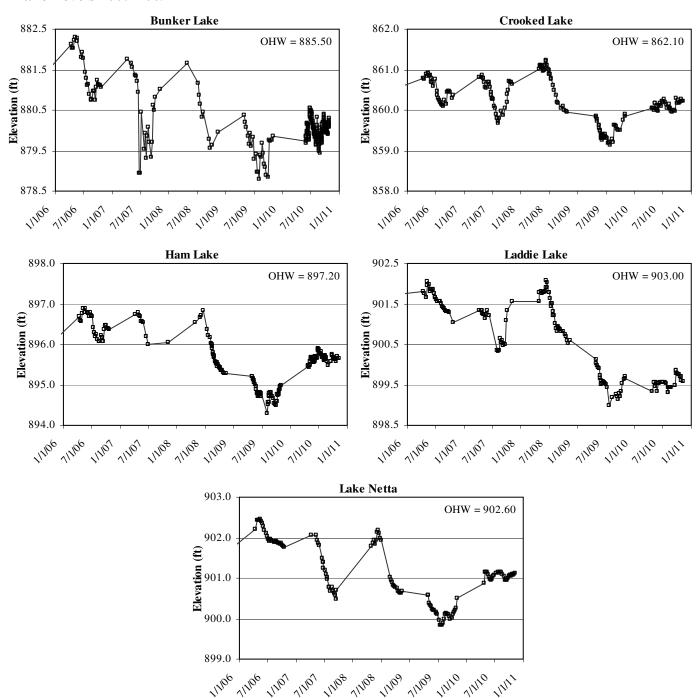

The data used in this study are limited in several ways and therefore the results should be interpreted with caution. Limitations include the length of the study (2 years), the small number of sampling sites, changes in sampling sites across years, and the statistical non-independence of different sampling sites located within the same stream or ditch. However, both 2008 and 2009 data support of the following general conclusions:

- Total number of families, FBI, and EPT indices of stream health are not different among unmaintained reaches of stream and those that have been maintained (ditched or cleaned) in the last 10 years.
- Coon Creek sites monitored by the MPCA and used to designate the creek as "biologically impaired" have biological indices of stream health that are in the middle of the range of the seven other streams that were monitored throughout Anoka County in 2009 and other years (includes student-monitored sites).
- There does not appear to be any strong correlations between TSS and any of the invertebrate indices, suggesting that TSS is not a strong predictor of macroinvertebrate community health in these systems.
- Unmaintained sites have slightly higher values of overall MSHA score, land use, substrate, and channel morphology scores, and lower turbidity values. All of these observations are consistent with better stream conditions, but the differences are not dramatic and there is inconsistency amongst years.
- The relationships between overall MSHA score and the three biotic indices suggested that only FBI was correlated with overall MSHA score.
- In 2008 and 2009 poorer invertebrate communities were found than by the MPCA in 2000 at the two Coon Creek sites designated as impaired (Highway 65 and Egret St.). The Highway 65 site (maintained) had poorer biotic indices of stream health than the Egret Street site (not maintained).
- There is notable variability in biological survey results among samplings. This has been observed by both professional and student long-term biomonitoring.

Lake Levels 2005-2009

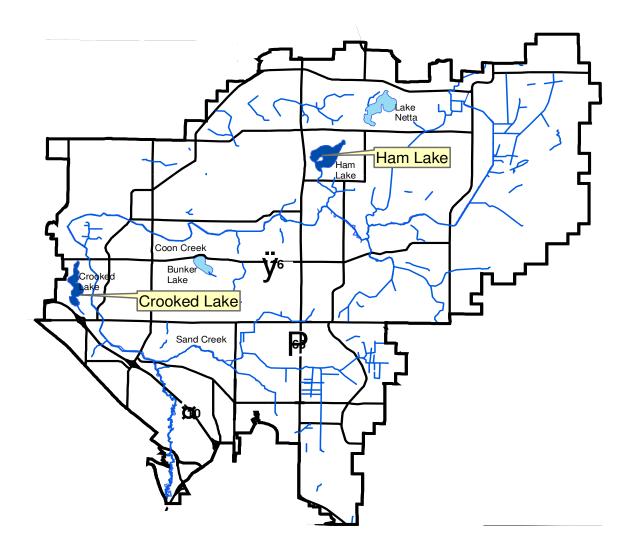

Description

Long-term monitoring of lake levels is useful for regulatory decision making, development decisions, lake management decisions and investigation into possible causes of various impacts to lakes. The lakes are monitored using an enamel gauge that is surveyed into each lake so that readings coincide with mean sea level elevations. The

gauges are read weekly and reported to the DNR by the Anoka Conservation District. The data is available on the DNR website, www.dnr.mn.us.state\lakefind\index.html.

To detect water quality trends and diagnose the cause of changes water quality samples are taken May through September twice-monthly. The samples are analyzed for the following parameters: total phosphorus, chlorophyll-a, Secchi transparency, dissolved oxygen, turbidity, temperature, conductivity, pH, and salinity. Detailed data for each lake are provided in the Anoka Water Almanac prepared by the Anoka Conservation District including summaries of historical conditions and trend analysis. Previous years' data are available from the ACD.

This program is to provide understanding of wetland hydrology, including the impact of climate and land use. These data aid in delineation of nearby wetlands by documenting hydrologic trends including the timing, frequency, and duration of saturation. Continuous groundwater level monitoring at a wetland boundary to a depth of 40 inches is done. District-wide, the ACD maintains a network of six wetland hydrology monitoring stations.

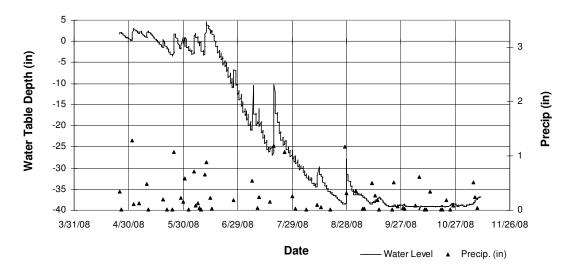

The purpose of reference wetland data is to help assure that wetlands are accurately identified by regulatory personnel. State and federal laws place restrictions on filling, excavation and other activities in wetlands. Commonly, citizens wish to do work in an area that is sometimes, or perhaps only rarely, wet. Whether this area is a wetland under regulatory definitions is often in dispute. Complicating the issue is that conditions in wetlands are constantly changing—an area that is very wet and clearly wetland at one time may be completely dry only a few weeks later (dramatically displayed in the graphs). As a result, regulatory personnel look at a variety of factors including soils,

vegetation, and current moisture conditions. Reference wetland data provide a benchmark for comparing moisture conditions in a disputed area to known wetlands, thereby helping assure accurate regulatory decisions. The analysis of reference wetland data provided above is a quantitative, non-subjective tool.

The simplest use of the reference wetland data is to compare water levels in the reference wetlands to water levels in a disputed area. The graphics and tables below are based upon percentiles of the water levels experienced at known wetland boundaries. The quartile boxes in the figures delineate the 10^{th} , 25^{th} , 50^{th} , 75^{th} , and 90^{th} percentiles. Water table depths outside of the box have a low likelihood of occurring or may only occur under extreme circumstances such as extreme climate conditions or in the presence of anthropogenic hydrologic alterations. If sub-surface water levels in a disputed area are similar to those in reference wetlands, there is a high likelihood that the disputed area is a wetland.

This approach can be refined by examining data from only the year of interest and only certain wetland types. This removes much of the variation that is due to climatic variation among years and due to wetland type. Substantial variation in water levels will no doubt remain among wetlands even after these factors are accounted for, but this exercise should provide a reasonable framework for understanding what hydrologic conditions were present in known wetlands during a given time period.

Water table levels are recorded every 4 hours at all 19 reference wetlands (except during winter) and the raw water level data available through the Data Access tool at: www.AnokaNaturalResources.com.

| Implications of Recent Monitoring Trends for the Management of the Watershed | | | | |
|--|--|--|--|--|
| Trend | Implications | | | |
| Decreases in precipitation | Decrease in flows and water quality, increased exceedances of state water quality standards. | | | |
| Increased frequency of rain | Decreased infiltration | | | |
| events greater than 1 inch | Undersized infrastructure | | | |
| | Increased loadings of Phosphorus and Total Suspended Solids (TSS). | | | |
| Decreases in Lake Levels | Increases in phosphorus levels and algae. | | | |
| Increase in flashiness of | Increases in turbidity and TSS in lower creek. General decrease in | | | |
| lower portions of system | water quality. | | | |
| Decreases in water quality | Increased need for retrofit projects. | | | |
| in older developed portions | | | | |
| of watershed | | | | |

| Expectations about the future Monitoring of the Watershed (2011 to 2013) | | | | |
|---|--|--|--|--|
| Expectations | Explanation | | | |
| Continued decreases in precipitation | Decreases in precipitation will contribute to water scarcity and water shortages throughout the District. | | | |
| Continued high intensity, short duration storms | Downbursts over smaller areas flush areas with enough water to suspend sediment, contribute to turbid condition and create peak flows which can have an erosive impact on stream channels. | | | |
| Increased "Impaired" Designations | The District historical focus has been on flood control requiring that the lower portion of the watershed discharge prior to the peak flow arrival from upstream. This strategy in turn has created a "flash flush" which is contributing to (or causing) loading of both dissolved pollutants such as Chloride, but is contributing to high turbidity levels and TSS as well. | | | |

| Immediate Needs (2013 – 2015) | | | | |
|---|---|--|--|--|
| Need | Explanation | | | |
| Focus on retrofit efforts in the lower portion of the watershed to reduce volume, Phosphorus loading, and TSS | The District has completed one "retrofit" study through the Anoka Conservation District (Sand Creek). In 2010 the District plans to assess the lower part of the Coon Creek Watershed (Coon Rapids). This effort needs to continue until the issues of volume, turbidity, phosphorus loading, and TSS in the lower Creek are addressed. | | | |
| Encourage water conservation and infiltration throughout the District | Two efforts should be considered: 1) Public education to conserve beyond watering restrictions (eg, aeration to encourage infiltration). 2) Use of 'Culvert Boarding' on high infiltration (losing reaches) of the public ditch system throughout the watershed. | | | |

End
